NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards[1] was established by an act of Congress on March 3, 1901. The Bureau's overall goal is to strengthen and advance the Nation's science and technology and facilitate their effective application for public benefit. To this end, the Bureau conducts research and provides: (1) a basis for the Nation's physical measurement system, (2) scientific and technological services for industry and government, (3) a technical basis for equity in trade, and (4) technical services to promote public safety. The Bureau's technical work is performed by the National Measurement Laboratory, the National Engineering Laboratory, and the Institute for Computer Sciences and Technology.

THE NATIONAL MEASUREMENT LABORATORY provides the national system of physical and chemical and materials measurement; coordinates the system with measurement systems of other nations and furnishes essential services leading to accurate and uniform physical and chemical measurement throughout the Nation's scientific community, industry, and commerce; conducts materials research leading to improved methods of measurement, standards, and data on the properties of materials needed by industry, commerce, educational institutions, and Government; provides advisory and research services to other Government agencies; develops, produces, and distributes Standard Reference Materials; and provides calibration services. The Laboratory consists of the following centers:

Absolute Physical Quantities[2] — Radiation Research — Chemical Physics — Analytical Chemistry — Materials Science

THE NATIONAL ENGINEERING LABORATORY provides technology and technical services to the public and private sectors to address national needs and to solve national problems; conducts research in engineering and applied science in support of these efforts; builds and maintains competence in the necessary disciplines required to carry out this research and technical service; develops engineering data and measurement capabilities; provides engineering measurement traceability services; develops test methods and proposes engineering standards and code changes; develops and proposes new engineering practices; and develops and improves mechanisms to transfer results of its research to the ultimate user. The Laboratory consists of the following centers:

Applied Mathematics — Electronics and Electrical Engineering[2] — Manufacturing Engineering — Building Technology — Fire Research — Chemical Engineering[2]

THE INSTITUTE FOR COMPUTER SCIENCES AND TECHNOLOGY conducts research and provides scientific and technical services to aid Federal agencies in the selection, acquisition, application, and use of computer technology to improve effectiveness and economy in Government operations in accordance with Public Law 89-306 (40 U.S.C. 759), relevant Executive Orders, and other directives; carries out this mission by managing the Federal Information Processing Standards Program, developing Federal ADP standards guidelines, and managing Federal participation in ADP voluntary standardization activities; provides scientific and technological advisory services and assistance to Federal agencies; and provides the technical foundation for computer-related policies of the Federal Government. The Institute consists of the following centers:

Programming Science and Technology — Computer Systems Engineering.

Preface

In carrying out its mandate to provide reliable reference data needed by the U.S. technical community, the Office of Standard Reference Data works closely with other Agencies of the Federal Government which are concerned with data bases in support of their mission responsibilities. The present publication is an example of this collaboration. The collection of mass spectral data contained herein represents a major effort of the Environmental Protection Agency and the National Institutes of Health. The National Bureau of Standards is participating in this effort by helping to assure adequate quality control of the data and by providing suitable dissemination mechanisms.

The goal of this continuing program is both an expansion of the size of the mass spectral data base and an enhancement of the quality of the data. Contributions of new or improved spectra, as well as general comments on the format and utility of the data, are strongly encouraged.

1983 Cumulative Indexes to EPA/NIH Mass Spectral Data Base

The EPA/NIH Mass Spectral Data Base has four distinct dexes, which are contained in this separate Index section. ovided in the Index section are Indexes of Substance Name versus ge number, Molecular Formula versus page number, Molecular eight versus page number, and the Chemical Abstracts Service AS) Registry Number versus page number, in the order named. iis new 1983 Cumulative Index section has been published to place the earlier versions so as to include and provide easy access the 6557 new spectra which may be found in Supplement 2, 83. As updates and additions to the EPA/NIH Mass Spectral ita Base are made, additional supplements will be published.

Each Index is explained in more detail below.

Substance Name Index

In this Index each substance in the Data Base is listed in phabetical order by its systematic name as it appears in the CAS h (1967–1971) or 9th (1972–1976) Collective Indexes. Synonyms r many substances, listed alphabetically, are included in this Index an additional aid. The appropriate CAS Registry Number, in ackets, is appended to every systematic name or synonym, as is e page number on which the mass spectrum appears.

Molecular Formula Index

Every substance is listed here by molecular formula, ordered the Hill Convention (see "2. Presentation of Spectra" in the introductory text of the Data Base). Those substances that have the same molecular formula are further alphabetically ordered by the systematic name. Only the systematic (CA Index) names are given in this Index. In each case, the substance name is accompanied by the CAS Registry Number, in brackets, and finally, by the number of the page upon which the mass spectrum appears.

Molecular Weight Index

Each substance is listed in this Index in order of increasing molecular weight. Those with the same molecular weight are further ordered alphabetically by systematic name. Only the systematic (CA Index) names are given in this Index. In each case, the substance name is accompanied by the CAS Registry Number, in brackets, and finally, by the number of the page upon which the mass spectrum appears.

CAS Registry Number Index

This Index lists the CAS Registry Number of each substance included in the data base in increasing order of the left-hand block of numbers. Each entry consists of a Registry Number and the associated page number. Occasionally, Registry Numbers are changed. Where appropriate, the old and the new Registry Numbers can be found in the Index.
